

Opinnate Network Security Policy Manager

End-to-end network security policy management for enterprise firewalls. From analysis to automation that makes operational work to be more efficient.

PROBLEM

Today's IT environments are more complex compared to past. There are several differences that make policy management a challenge.

Multiple Segments:

Every new project or application adds new network segments, increasing firewall footprint and policy scope.

Multi-vendor Usage:

Enterprises commonly run two or more firewall vendors, making policy governance harder across platforms

Least Privilege:

Access between segments should be granted only as needed; overly permissive rules must be reduced or removed.

Cloud Adoption:

Hybrid cloud is a common approach and typically introduces cloud firewalls alongside on-prem controls.

Together, these trends create complex environments with more rules to manage and more change requests to fulfill.

As a result, network security policy management becomes time-consuming—especially for policy changes and continuous hardening.

Opinnate NSPM Key Features

- ✓ Detect shadowed, unused, and permissive rules fast.
- ✓ Prove real rule usage from historical syslog data (now user/app-based)
- ✓ Auto-harden policies by disabling like expired, unused, shadowed rules
- ✓ Automate rule creation and updates—including FQDN and zone-based rules.
- ✓ Scale operations with multi-collector logging and built-in auto backup

SOLUTION

A system that enables network security policy management in an easy way.

Opinnate network security policy management solution simplifies policy management by providing analysis, optimization, audit, reporting, and automation features, saving you time and effort while enhancing your organization's security posture.

Opinnate offers a hassle-free approach to network security policy management, enabling you to focus on your core business objectives.

WHY OPINNATE

- ✓ Easy to install-integrate-use solution
- ✓ No requirement for any firewall manager solution and lower system resource usage
- ✓ Real-life use cases coming from real customer experience
- ✓ Make rule usage analysis based on past syslog data collected from firewalls
- ✓ Use the time you save on policy management for the work you care about—powered by a user-friendly UI

WHO We Are

Opinnate offers an innovative automation technology that tackles policy management holistically. Designed by security experts that have decades long executive and hands-on experience, Opinnate platform not only addresses security policy management, policy analysis, policy optimization and policy change operations under the same roof but also handles approval processes to offer an end-to-end customer experience. Opinnate stands out by removing dependencies to external tools and costly prior work.

Features in Depth

Opinnate NSPM offers a comprehensive suite of features, including analysis, optimization, audit, reporting, and automation capabilities, designed to enhance your organization's overall security posture. By using our solution, you can save valuable time and effort in managing your network security policies.

ZERO-TOUCH AUTOMATION

Policy changes no matter how complex the request is or how many requests exist can easily be handled with real-life use cases

MANAGING PERMISSIVE RULES BASED ON HISTORY

The mechanism is unique to Opinnate. Based on historical traffic logs coming from firewalls make rule usage analysis for any rule.

BEST PRACTICE BASED RISK ASSESSMENT

Make risk assessment of your firewalls all the time to see what are the missing points and what action to take

MAKE YOUR APPLICATIONS MORE VISIBLE

Get an end-to-end view of each application across all firewalls

ALWAYS READY, NEVER EXPIRED

Automate firewall backups and stay ahead of expirations by tracking firewall licenses and certificates in one place.

BE READY FOR ANY AUDIT

Be ready for any audit with predefined checklists and pass the audits in a short time
